## ABSTRACT

Set of equipment (1) for a motor vehicle <u>includes</u> <del>comprises:</del>
[[-]] an inflatable structure (2), [[-]] a support (4) for the inflatable structure, [[-]] elements for (6) inflating the structure in a direction of inflation (D) in order to deploy it, [[-]] a plate (8) for spreading the load when an occupant of the vehicle impacts on the deployed inflatable structure, and [[-]] elements for guiding the structure as it deploys so that, in the deployed configuration, the structure extends along a median directrix line (L) distinct from its direction of inflation (D). The guide elements <u>include comprise</u> the side wall (12) of the structure which, in the deployed configuration, is substantially taut.
